CHATVIEW: A&M'S TOOL FOR ADVANCED CHAT DATA FORENSIC COLLECTION, ANALYSIS AND REVIEW

SEARCH, ANALYSE AND REVIEW CHAT DATA WITH A&M CHATVIEW

With the use of mobile messaging platforms on the rise, forensically collecting chat data for review is becoming increasingly important to litigations, arbitrations and investigations. The challenge lies in capturing important information such as chat context, group chat participants, emojis, voice messages, files and processing these into an easy-to-review format. When so much depends on reviewing chat data accurately and thoroughly whilst meeting tight deadlines, legal & investigation teams need a solution which can help them overcome these challenges.

A&M CHATVIEW

A&M's experts have created ChatView using forensic processing workflows to help legal teams better cope with chat discovery. ChatView offers a review output with a near-native format similar to the original chat conversation on mobiles. ChatView enables users to effectively and efficiently search, analyse and review chat data with the added benefits of being in a review environment.

A&M ChatView can be used on chat data such as **WeChat, WhatsApp, DingTalk** and other chat platforms.

WHY USE CHATVIEW?

FORENSIC EXPERTS

ChatView was developed by our team of digital forensic experts who have the know-how and experience in handling mobile chat data for disputes and investigations

LEADING TECHNOLOGY

ChatView utilises leading technology in mobile chat data collection, processing and analysis methodologies

EASY REVIEW EXPERIENCE

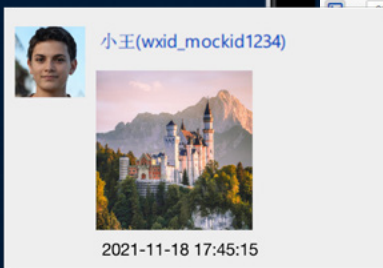

Review mobile chat data in a near-native format like the original chat App and easily sort and search through timelines, participants and chat groups

Code, redact, and highlight chat messages in the same way as any other electronic file types.

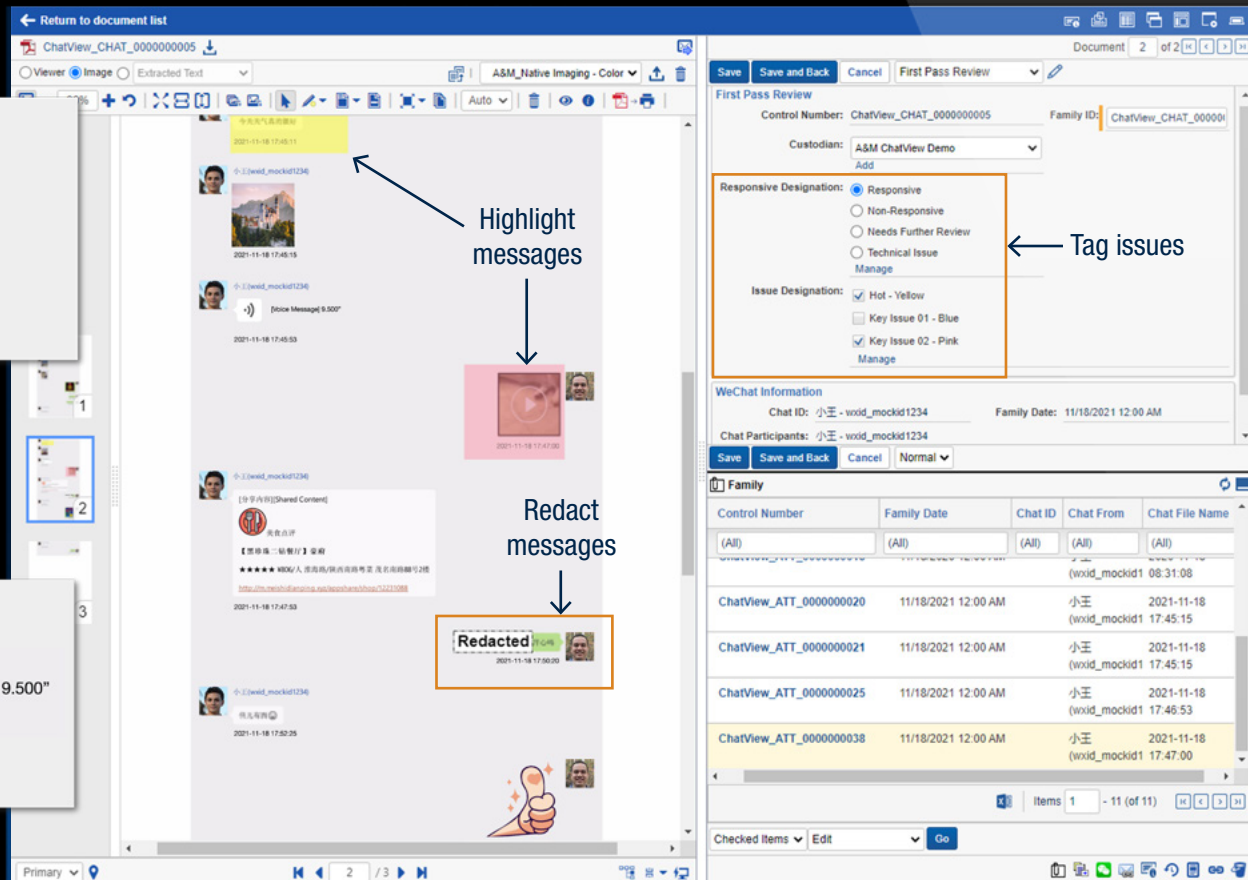

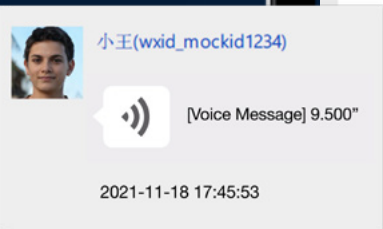

Review texts, images, emojis, videos, audios and shared content messages in near native format.

Disclose and produce targeted relevant chat messages and files instead of the entire chat conversation.
